PROFESSIONAL SUMMARY

Technical Product Manager with 10 years of experience owning platform and AI-driven products in regulated industries (FinTech, Life Sciences, ChemTech). Specializes in translating ambiguous business and regulatory problems into scalable, cloud-native product solutions with clear adoption, compliance, and efficiency outcomes. Drove product strategy and execution for agentic AI systems, including a patent-approved Regulatory Agent that automated compliance workflows and reduced processing time by 99%. Brings deep systems thinking across distributed architectures, data platforms, and multi-agent orchestration, paired with an MBA in Analytics to align technical investments with business value, risk, and long-term platform scalability.

SKILLS

- Product vision, strategy, and outcome-driven roadmaps
- Customer discovery, problem framing, and market insight
- Prioritization and trade-off frameworks (RICE, WSJF, cost-benefit)
- Technical product architecture (cloud platforms, APIs, distributed systems)
- Platform & data contract design with scalability, security, and reliability
- AI & intelligent product design (LLMs, RAG, agentic workflows, governance)
- Agile execution: backlog ownership, PRDs, releases, and delivery planning
- Product analytics, experimentation, and KPI-driven decisions
- Business acumen: ROI, cost modelling, risk, and impact assessment
- Cross-functional leadership and executive communication

WORK EXPERIENCE

Vertex Inc. | Gurugram, India | Sept 2024 – Present

Technical Product Owner - Application Modernization & Platform Enablement

Owning the product strategy and execution for modernizing a legacy tax platform into a cloud-native, compliance-first PaaS ecosystem serving internal and external product teams.

- **Product Strategy & Discovery:** Defined the modernization roadmap by identifying developer pain points (release latency, compliance risk, environment sprawl) and translating them into platform capabilities with measurable outcomes.
- **AI-Driven Product Innovation:** Conceptualized and led delivery of an internal Code Analysis Agent leveraging LLMs to automatically map legacy Java dependencies, accelerating monolith decomposition by 40% and reducing manual analysis effort.
- **Platform Architecture & Trade-offs:** Drove architectural decisions for Kubernetes-based microservices on Azure, balancing scalability, compliance, and operational cost; introduced Compliance-as-Code (OPA) as a productized platform capability.
- **Developer Experience (DX):** Launched Golden Path templates and self-service workflows that reduced service onboarding time from days to hours.
- **Cross-Functional Leadership:** Acted as the product interface between engineering, security, compliance, and leadership to align delivery with regulatory and business priorities.
- **Execution & Delivery:** Owned backlog, sequencing, and release planning for platform initiatives; ensured reliable multi-environment deployments using Argo CD and Temporal.
- **Reliability & Scale:** Oversaw lifecycle and SLOs for Kubernetes clusters across AWS and GCP; guided decisions on streaming infrastructure (Kafka, Connect) to improve throughput and operational stability.

Albert Invent | Bengaluru, India | Aug 2022 – Sept 2024

Technical Product Lead & Founding Engineer

Owned the end-to-end product vision, architecture, and delivery of a zero-to-one Chemical Intelligence Platform in a highly regulated domain.

- **Product Vision & Ownership:** Defined the product strategy for automated chemical compliance, working directly with domain experts to convert regulatory complexity into scalable product workflows.
- **Patent-Listed AI Product:** Conceived and led development of “**The Chemist Agent**”, an agentic AI system that autonomously generates GHS-compliant Safety Data Sheets (SDS), reducing turnaround time from **2 weeks to 5 minutes**.
- **Problem-to-Platform Translation:** Modelled complex chemical and regulatory relationships into a graph-based backend, enabling sub-second compliance checks and “one-click” regulatory validation.
- **Platform Enablement:** Designed Kubernetes-native automation (controllers, operators) to provide self-service environments, sandbox resets, and access control as core product capabilities.
- **Cost & Scale Decisions:** Introduced Knative-based autoscaling and Istio traffic policies to optimize cloud spend while supporting ML workloads and bursty enterprise usage.
- **Go-to-Market Readiness:** Established CI/CD, security baselines, and SOC2 readiness, taking the product from prototype to enterprise deployments across **China and Taiwan**.
- **Founder-Level Execution:** Balanced roadmap prioritization, technical feasibility, and customer commitments in a fast-moving startup environment.

Dassault Systems (Medidata) | Pune | June 2020 - Dec 2021

R&D Engineer (Life Sciences / Digital Twin)

- Built and maintained Jenkins pipelines for CI/CD across internal platforms.
- Automated system configuration and environment management using Puppet and Bash.
- Designed Grafana dashboards for service health, performance, and capacity monitoring.
- Assisted in deploying edge-to-cloud ingestion pipelines for healthcare wearable initiatives.
- **IoT & Edge Computing:** Led design of a high-throughput ingestion layer for Digital Human Twin systems, processing real-time telemetry from medical wearables.
- **Data Pipeline Engineering:** Engineered fault-tolerant Kafka streams for sensitive patient data, ensuring HIPAA-compliant, zero-loss ingestion for decentralized clinical trials.

Capgemini (Morgan Stanley) | Pune, India | May 2017- June 2020

Senior Consultant - Full Stack Engineer

- Developed enterprise-grade data ingestion and migration systems using ETL-based event pipelines.
- Delivered reusable data synchronization tools to ensure financial data integrity across systems.
- Collaborated with data governance teams to ensure compliance with privacy regulations (CCPA).
- Operated in a zero-failure FinTech environment with rigorous automated testing and defensive coding practices for investment banking workflows.

PROJECTS

Compliance-First Platform Modernization (Vertex Cloud Platform)

Outcome: Enabled faster, safer modernization of a legacy tax platform while reducing compliance risk and developer friction.

- Defined the **product vision and success metrics** for transitioning a monolithic tax system into a compliant, cloud-native platform.
- Identified key customer (internal developer & platform team) pain points around release velocity, regulatory risk, and environment consistency.
- Shaped the platform capability roadmap covering self-service onboarding, compliance automation, and multi-environment parity.
- Drove prioritization decisions balancing modernization speed vs. regulatory assurance in a high-compliance domain.
- Partnered with security, compliance, and engineering stakeholders to validate platform capabilities before broader adoption.

Automated Regulatory Compliance Platform (Patent-Listed)

Outcome: Reduced regulatory turnaround time from weeks to minutes for chemical R&D teams.

- Defined the problem statement, success metrics, and MVP scope for automated SDS generation in regulated environments.
- Converted complex regulatory rules into productized workflows consumable by enterprise users.
- Designed multi-tenant sandboxing as a product capability to safely test regulatory scenarios without production risk.
- Partnered with compliance and domain experts to validate outputs and ensure regulatory correctness.

Genomics Cohort Analysis Platform

Outcome: Enabled self-service cohort creation and faster study execution for genomic researchers.

- Translated researcher workflows into user-facing product features for cohort definition, execution, and analysis.
- Defined access control, data isolation, and auditability requirements for regulated research use cases.
- Established product KPIs around study setup time, query performance, and usability.
- Collaborated with engineering teams to sequence delivery across data ingestion, analytics, and UI capabilities.

Sensor Cloud Data Fabric (Digital Human Twin)

Outcome: Supported near real-time monitoring of patient vitals in decentralized clinical trials.

- Contributed to defining the long-term product vision for a unified sensor data and clinical analytics platform.
- Identified core platform capabilities required for real-time ingestion, monitoring, and observability.
- Supported rollout of operational dashboards and data quality metrics for clinical trial teams.
- Ensured alignment with healthcare compliance and data integrity expectations.

CCPA Compliance & Data Modernization

Outcome: Enabled enterprise readiness for evolving data privacy regulations.

- Helped define **compliance-driven requirements** for data migration and audit workflows.
- Identified risk areas related to data access, retention, and traceability.
- Supported delivery of privacy-aligned data handling patterns in regulated enterprise systems.

EDUCATION

India Institute of Management, Kozhikode

Executive MBA in Product Management & Business Analytics; GPA: 3.7

Kozhikode

Apr 2022 - May 2024

SKIT Institute of Technology

Bachelor of Technology in Computer Science; GPA: 8.2

Jaipur

June 2013 - Aug 2017

PATENTS & VENTURES

- Patent: "System and Method for Automated Safety Data Sheet Generation" (WIPO PCT Listed).
- Weekend Ventures: Hands-on builder of Agentic AI Apps, including a "Financial Portfolio Agent" that autonomously rebalances investments based on real-time market news and user risk profiles.
- Build an end to end Citizen Engagement Platform as a Startup gig.
