PROFESSIONAL SUMMARY

Hands-on Technical Lead and Inventor with 10 years of experience architecting distributed systems for high-compliance domains (FinTech, Life Sciences, ChemTech). Expert in building **Agentic AI products** that autonomously execute complex business logic, including a patent-approved "**Regulatory Agent**" that reduced process time by 99%. Deep expertise in Cloud-Native Microservices, and Multi-Agent Orchestration. Fuses technical rigor with an MBA in Analytics to build resilient, high-throughput software supply chains.

TECHNICAL SKILLS

- Architecture: Microservices, Event-Driven Architecture, Solid Principles, Domain-Driven Design (DDD), Strangler Fig Pattern, Serverless.
- AI & Agentic Systems: Ollama, Azure Foundry, LangChain, Multi-Agent Orchestration, RAG (Retrieval-Augmented Generation), Vector Databases (Pinecone, ChromaDB), OpenAI API, Hugging Face.
- Core Stack: .Net Core, C#, Java (17+), Spring Boot, Python, Golang, React, JavaScript, NodeJS, SQL (PostgreSQL, AWS Aurora), NoSQL (MongoDB, DynamoDB).
- DevOps & Cloud: AWS, Azure, Kubernetes, Docker, Terraform, CICD (Jenkins, GitHub Actions, ArgoCD)

WORK EXPERIENCE

Vertex Inc. | Gurugram, India | Sept 2024 – Present

Technical Lead (Application Modernization, PaaS Adoption)

Leading the technical modernization of a legacy tax platform into a cloud-native ecosystem.

- Agentic Modernization Strategy: Designed and implemented an internal "Code Analysis Agent" using LLMs to automatically map legacy Java dependencies, accelerating the decomposition of the monolith by 40%.
- Cloud Architecture: Architected the migration to a Kubernetes-based microservices environment on Azure, implementing "Compliance-as-Code" policies (OPA) to ensure automated regulatory adherence.
- Technical Leadership: Mentoring a squad of 10+ engineers in TDD and 12-factor app principles; introduced "Golden Path" templates for self-service microservice spinning.
- Oversaw the end-to-end lifecycle of Kubernetes clusters deployed across AWS and GCP, ensuring high uptime & performance.
- Managed streaming Infra using Kafka and Connect, optimizing throughput via custom partitioning and broker configurations.
- Delivered repeatable, automated deployments using Argo CD and Temporal with consistent multi-environment support.

Albert Invent | Bengaluru | Aug 2022 – Sept 2024

Technical Lead & Founding Engineer

Architected the core "Chemical Intelligence Platform" for a high-growth startup.

- Developed K8s controllers and operators in Go and Python to automate environment provisioning, access control, and sandbox resets.
- Deployed microservices and ML workloads on Kubernetes with Knative for cost-effective autoscaling, backed by Istio-managed networking policies.
- Invented "The Chemist Agent" (Patent Listed): Lead architect and developer of a patent-pending AI system that autonomously generates GHS-compliant Safety Data Sheets (SDS). The agent reasons through thousands of chemical rules, reducing generation time from 2 weeks to 5 minutes.
- System Design: Built a scalable graph-based backend to model complex chemical relationships and regulatory rules, enabling sub-second query performance for "One-Click" compliance checks.
- Zero-to-One Scale: Established the initial CI/CD pipelines, code quality gates, and security protocols (SOC2 readiness), taking the product from prototype to enterprise rollout in China and Taiwan.

Dassault Systems (Medidata) | Pune | June 2020 - Dec 2021

R&D Engineer (Life Sciences / Digital Twin)

- Built and maintained Jenkins pipelines for continuous integration and delivery across internal platforms.
- Used Puppet and Bash for system automation and configuration management.
- Designed alerting dashboards in Grafana to monitor service health and resource utilization.
- Assisted in deploying edge-data ingestion pipelines as part of a healthcare wearable device initiative.
- IoT Sensor Fusion: Led the design of a high-throughput ingestion layer for the "Digital Human Twin," integrating real-time telemetry from wearable medical sensors (Edge Computing) to cloud-based clinical trial platforms.
- Data Pipeline Architecture: Engineered fault-tolerant Kafka streams to handle sensitive patient data (HIPAA compliant), ensuring zero data loss during decentralized clinical trials.

Capgemini (Client: Morgan Stanley) | Pune, India | May 2017- June 2020

Senior Consultant, Full Stack Engineer

- Developed data ingestion and migration systems for enterprise clients, with ETL-based event pipelines to support analytics.
- Worked closely with data governance teams to ensure compliance with privacy regulations (CCPA).
- Delivered reusable data sync tools for financial data integrity and reconciliation across systems.
- FinTech Rigor: Operated in a "Zero-Failure" environment, implementing rigorous automated regression suites and defensive coding practices for investment banking workflows.

PROJECTS

Regulatory & Compliance – Automated SDS

Innovation and R&D under one platform, helps the chemical innovators to innovate faster.

- Led a team to create a multi-tenant sandbox platform enabling platform simulations for enterprise users.
- Built Kubernetes-native automation using custom Python operators for tenant lifecycle operations and data seeding.
- Developed an event management platform to distribute configuration events and sync updates across environments.
- Implemented autoscaling using AWS Fargate and service isolation via Istio's routing capabilities.

Genomics Cohort Browser

Platform for the genomic experts to conduct the studies by creating cohort and run the K flow with genomic database to deduce the results of study.

- Implemented features like authentication, authorization, session management, state management, etc.
- Containerized ML-based cohort builder services and deployed them on Kubernetes clusters.
- Created robust CI/CD pipelines with ArgoCD and GitHub Actions to support dynamic deployment cycles.
- Designed Kafka-driven messaging layer to handle data movement between microservices and genomic databases.

Sensor Cloud Data Fabric

End to end Clinical Trials Management SaaS of human vital sensors to monitor the Medicine Study.

- It is a very ambitious and visionary product aims to create a digital human twin to help medical science in new ways.
- Worked on a platform to track biometric data from wearable devices during clinical trials.
- Supported edge data ingestion via Kafka and automated cloud deployments using Jenkins and Puppet.
- Provided real-time dashboards and metric tracking via SumoLogic and ELK.

CCPA Data Migration

- This was a data regulation and Audit compliance project, to adhere to incoming data privacy rules.
- Low-Latency Trading Systems: Developed high-frequency trading and settlement applications using Java and Scala, optimizing garbage collection and concurrency to meet microsecond latency SLAs.

EDUCATION

India Institute of Management, Kozhikode
Executive MBA in Supply Chain & Business Analytics; GPA: 3.7

Kozhikode
Apr 2022 - May 2024

SKIT Institute of Technology
Bachelor of Technology in Computer Science; GPA: 8.2

Jaipur
June 2013 - Aug 2017

PATENTS & VENTURES

- Patent: "System and Method for Automated Safety Data Sheet Generation" (WIPO PCT Listed).
- Weekend Ventures: Hands-on builder of Agentic AI Apps, including a "Financial Portfolio Agent" that autonomously rebalances investments based on real-time market news and user risk profiles.
- Build an end to end Citizen Engagement Platform as a Startup gig.
